This timely new atlas features 350 high quality photographs of significant radiologic findings in patients with orthopedic implants. As the only resource dedicated solely to implant radiology, content offers the most comprehensive coverage available on hand and upper extremity, shoulder, hip, knee, spine, foot and ankle, and trauma implants in adults, as well as a special chapter on the use of implants in children. A bevy of expert contributors maintains a tight focus on the needs of the clinician, so every page is useful and to the point.
